PROFESSIONAL OBJECTIVE

Motivated engineering graduate specialized in electronics, microelectronics, and embedded systems, seeking to contribute to innovation in medical technologies. With two years of hands-on experience in ultrasonic probe development and a strong foundation in both hardware and signal processing, I aim to join a research-driven environment where I can further develop advanced electronic systems for acoustic applications. Open to opportunities leading toward doctoral studies in this field.

SKILLS

Programming languages : C/C++, Python.
Hardware description languages : VHDL, Verilog.
Scientific softwares Matlab, LTSpice, Field II, MUST, NI LabVIEW.
Characterization tools : Spectrum analyzers, oscilloscopes, impedance analyzer, VNA.
Operating systems : Windows, Unix and Linux.
Computer assisted design : KiCad, Altium Designer, Cadence Virtuoso.
IDEs : STM32 Cube IDE, MPLAB X IDE, Visual Studio.
Office software : Microsoft Office, Open Office, LaTeX, Markdown.
Languages : French (native), English (fluent), Italian (intermediate).

EMPLOYMENT HISTORY

Electronics Engineer Intern VERMON *February 2025 - August 2025*
Designed and validated a 64-channel amplification board integrated into an ultrasound probe as part of a government-funded research project.
Conducted performance testing and participated in system-level integration and debugging.
Assistant Engineer Intern GREMAN *May 2024 - August 2024*
Designed and validated a measurement bench for power measurement on capacitive ultrasound transducers probe.
Automated calibration and measurement processes.
Developer KLIMTOP' Controls *May 2023 - August 2023*
Developed a Python-based data processing and monitoring tool for an agricultural energy self-consumption system.
Enabled remote diagnostics and performance tracking.

EDUCATION

Electronics and Energy Engineering *September 2019 - September 2025*
Polytech Tours, France
Electronics and Communication Engineering *September 2023 - February 2024*
Erasmus program, University of Siena, Italy

PROJECTS

Measurement bench for capacitive ultrasound transducers *2025*
Developed an electrical and thermal measurement bench for capacitive ultrasound transducer for my last year university project.
Image compression with artificial neural networks *2024*
Wrote a review of existing methods of image compression using artificial neural networks for a university project in Italy.
Antenna and satellite weather station *2023*
Designed, built and automated a satellite weather station. Downloaded data from NOAA satellites.
